
**METHOD AND SYSTEM FOR DYNAMICALLY
SENDING EMAIL NOTIFICATIONS WITH ATTACHMENTS
IN DIFFERENT COMMUNICATION LANGUAGES**

5

10

A method and system dynamically send a language-specific email and attachment, using for example, the Systems Applications and Products (SAP) workflow technology and Internet connectivity to provide customized messages and PDF attachments to any customer, worldwide, via the customer's Internet address. To this end, the system parses a document to retrieve variable data related to several destination languages. Then, based on the parsed variable data, the system selects the specific destination languages for the electronic message and attachment, and sends the same in the selected destination languages to the various destination addresses. Concurrently, the system may also send the retrieved variable data to all or some of the destination addresses.
